

Your Zoom Meetings using Sorenson VRS

The old method

See the Difference!

The new method: Sorenson for Zoom

You must dial the Zoom meeting phone number to get a VRS interpreter on your videophone

Join your Zoom meeting and add a VRS interpreter on the same device

Look back and forth between your interpreter screen and your meeting screen

See the meeting and the interpreter on the same screen

Interpreter can only hear, not see other meeting participants, so it's hard to identify speakers and pick up unspoken cues

Interpreter can see everyone in the meeting to easily identify who's talking and convey visual context

Interpreter can't see shared screens or content. They are unable to understand on-screen references

All participants and the interpreter can view and shared content in meetings while still seeing each other

Other participants can't see the interpreter, so they don't know to wait for them to finish so you can comment

Everyone can see the interpreter and allow time for each other to get the message and respond

A one-sided meeting experience

A shared, collaborative meeting experience for everyone

Why are people using Sorenson for Zoom in virtual meetings?

Virtual meetings connect people across the globe, and now across languages. Sorenson for Zoom offers fluid conversation between Deaf and hearing meeting participants. Share ideas, share content, and share a moment on one screen.

FCC rules permit you to port your telephone number to the VRS provider of your choice. If you request a new number, Sorenson will provide you with one for the geographic area where you live or work. To ensure proper routing of 911 calls, it is important that you provide, and update in the event it changes, the physical address (i.e., the Registered Location) from which you are placing the call. You can update your Registered Location by calling 800-659-4810 or by visiting <https://sorenson.com/support/vrs/manage-account/>. Emergency calls made via internet-based TRS may not function the same as traditional E911 service. For example, you may not be able to dial 911 if there is an internet-service failure or if you lose electrical power, and your 911 call may not be routed correctly if you have not updated your Registered Location. Hearing point-to-point video users will not be able to place emergency calls. For more information on the process of obtaining ten-digit numbers and the limitations and risks associated with using Sorenson's VRS to place a 911 call, please visit Sorenson's website: www.sorenson.com/legal. For information on toll-free numbering, please visit <https://sorenson.com/tollfree>.
